

Studio JuJu's AT-Lamps, Bollard and the Black Box

Posted by Lisa Smith | 29 May 2009

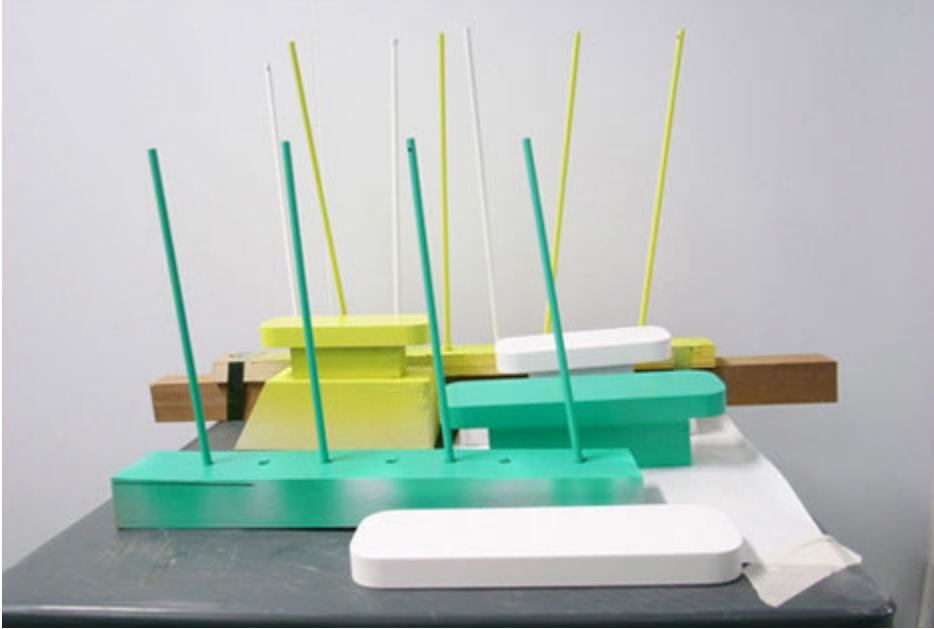

These are two lovely examples of indirect lighting for the floor and the wall from Singapore-based [Studio JuJu](#), who seem to have adopted a [SANAA](#)-like sensibility toward furniture.

AT-lamps come in two heights and function as tables while lighting the surface beneath them. A series of LEDs is embedded into the wooden tabletop, which is supported by skinniest of steel legs.

Bollard and the Black Box sits facing the wall. When the touch switch/bollard is poked, it lights up, reflecting gently off an adjacent surface.

At-lamps

Bollard and the Black Box
